

RMT 'Elevator' Speech

- **The Army's new Resource Management Tool (RMT) is a component of the Enterprise Army Workload and Performance System (eAWPS), the Army's capstone suite of tools that will create a Total Army Data Environment enabling leaders at all levels to use common data for their unique decision-making needs.**
- **Currently, the Army's budgeting, manpower distribution, workload forecasting, and performance measurement do not function as one integrated process, because of the difference in command unique and single function information systems used to track resources, workload, and performance. RMT is a web-based suite of resource management software tools that integrate Financial and Manpower data in one single package. It is a vital component in supporting the Army's Planning, Programming, Budgeting, and Execution (PPBE).**
- **RMT creates an Army-wide solution for synchronizing Dollars-Manpower-Personnel at the command and subordinate organizational levels that focuses on:**
 - 1) Integrating Financial (Program, Budget, Funding, and Execution dollars) and Manpower (Authorizations, Force Structure, and Personnel) data;**
 - 2) Facilitating and managing current year execution of dollars and manpower distribution, workload forecasting, and performance measurement;**
 - 3) Enabling the synchronization of dollar and manpower program-budget submissions back to HQDA;**
 - 4) Replacing many existing systems with a single web-enabled software tool.**
- **As a part of eAWPS, RMT benefits the Warfighting Support Army by**
 - 1) Transforming Resource Management business practices below HQDA;**
 - 2) Eliminating the requirement to input duplicate data into multiple systems;**

- 3) Providing authoritative financial source, format, or for earned value management and workload programming (Army Workload and Performance System (AWPS));**
- 4) Providing vital financial, manpower, and personnel data to facilitate Lean Six Sigma projects;**
- 5) Enabling the success of other applications such as the Enterprise Management Decision Support (EMDS) by providing an authoritative data source for resource data.**
- As RMT's role in benefiting the Warfighter: RMT benefits the Warfighter by providing new data analysis capability required for continuous improvement responsiveness, flexibility, and quality delivered by the Warfighting Support components.**
